

Buttons

Unified Control & Monitoring System

Bitfocus Buttons

Control & Routing - just easy

Bitfocus Buttons revolutionizes control system management by simplifying complex workflows across AV, broadcast, live production, and installation environments. Designed to integrate seamlessly with over 750 professional industry-leading hardware and software solutions, Buttons empowers professionals with intuitive and scalable control solutions that adapt effortlessly to your evolving operational needs.

♦ Intuitive User Experience

Effortlessly control complex setups without extensive training

♦ Scalable and Secure

Manage multiple operators, desks, and installations with PIN & RFID authentication

♦ Cross-Vendor Compatibility

Seamless integration with AV, broadcast, installations, and beyond.

♦ IP Workflow Ready

Native support for NMOS control (ST 2110 and IPMX routing)

♦ Advanced Tally & Routing

Tally Management, Tieline Management, Virtual Routing

Trusted globally by thousands of operators across live broadcast, houses of worship, town halls, college football and corporate events.

V1.8 Product Sheet

Revision 3

Tired of Fragmented Control?

Managing diverse equipment across broadcast, AV, and installed environments is increasingly complex. Budget pressures demand maximizing efficiency and resource utilization, while technology evolves rapidly, risking costly hardware obsolescence. Traditional, proprietary control systems often create silos, limit flexibility, and lock you into specific vendors, hindering innovation and operational agility.

At Bitfocus, we believe in moving forward. Born from the production floor, we champion collaboration and open standards over closed ecosystems. Building on the success of the widely adopted open-source Companion project, Bitfocus Buttons is our next-generation control software, engineered for the demanding requirements of modern, complex productions – whether in a broadcast studio, an AV-equipped boardroom, a live event venue, or a multi-campus installation.

Buttons isn't just another Broadcast Control System; it's a Unified Control System designed for the convergence of technologies. Seamlessly route SDI, NMOS / ST 2110, IPMX, NDI, and control equipment and software across all your operations. Break down the barriers between broadcast, pro-AV, and IT infrastructure with a single, powerful software layer.

Applications

Broadcast Galleries

Streamline control of audio mixers, graphics, routing & intercoms for news, sports & live shows.

Master Control (MCR)

Control playout, routing (SDI/IP/2110), monitoring and failover control for reliable 24/7 transmission for TV & Radio.

Corporate Events

Manage presentations, video playback, lighting, audio & cameras for impactful town halls, conferences & webcasts.

Live Performance & Worship

Control lighting consoles, media servers, audio systems & projection for concerts, theatre & house of worship services.

Installed AV Spaces

Control of displays, VC systems, audio routing & environmental settings in boardrooms, courtrooms & training rooms.

Education

Simplify technology management for classrooms, lecture halls, auditoriums & campus-wide communication systems.

Remote Production (REMI)

Efficiently manage cameras, encoders, routing & communications between remote sites & central control rooms.

Digital Signage & Display

Control content playback, scheduling & device power for billboards, video walls & public information displays.
